

# FAXCOM<sup>®</sup> for iSeries (AS/400<sup>®</sup>)

- Total fax management directly from your AS/400
- Increase productivity and lower operational and phone costs
- Broadcast and/or batch mission critical fax transmissions automatically
- Centralized management of corporate fax transmissions and outbound e-mail
- Fax from your Windows applications
- Scalable to support virtually any enterprise computing environment

FAXCOM for iSeries provides everyone in your company with a powerful communications resource - integrated fax messaging. With FAXCOM for iSeries, documents can be faxed from any terminal on your iSeries directly to millions of fax machines worldwide. You can send reports the first thing each morning or schedule a fax to start after hours. FAXCOM for iSeries is a complete fax management system for your iSeries or AS/400.

## Increase Your Workflow Process Efficiency and Reduce Costs

Realize immediate gains in productivity as users fax directly from their desks. All waiting and redialing is handled automatically. Striking, laser-sharp documents are delivered to their destinations, complete with overlaid logos, signatures and business forms. Cost center management capabilities allow you to track fax usage, facilitating internal department charge back; and security features ensure that the systems manager controls fax access. Additionally, if several FAXCOM for iSeries users send documents to the same destination, FAXCOM for iSeries can combine these documents into a single transmission automatically. This eliminates the time and cost associated with dialing a fax location multiple times throughout the day.

## Simplified Installation and Ease of Use

FAXCOM for iSeries has a simple self-installation procedure that allows same-day operability. FAXCOM for iSeries menu driven design complies with IBM's SAA standards and provides an extensive help screen facility. Users get familiar with the system quickly and easily and can start sending faxes almost immediately.

## Interface with Flexibility

Furthermore, FAXCOM for iSeries provides the flexibility to create and send faxes in a variety of different ways to meet the requirements of specific applications. FAXCOM for iSeries can automatically extract the fax number or email address from your files for seamless integration with any application. It also provides a built-in text editor and a "quick memo" facility that allows users without Document Editors to send faxes. For users who want to fax documents and reports from business applications, FAXCOM for iSeries provides an output queue manager, which allows documents to be redirected from printers to the fax server. Finally, an application-programming interface (API) allows iSeries programmers to develop custom fax applications.

## FEATURES:

- Automatic cover page generation
- Comprehensive queue management (view, change, and cancel)
- Complete fax phone directory capabilities
- Accounting codes to track usage by cost center
- Security system controls user access to fax system options
- SAA compliant user and administration screens
- Business forms overlay capabilities
- Incorporate signatures, logos, and graphics into documents
- Interface with your application files
- Automatic batching of faxes to a single destination
- Full API support for custom programs
- Non-programming interface
- Least cost routing
- E-mail support

## Build Enterprise-wide Fax Networks with Confidence

FAXCOM for iSeries can be configured with both single channel and expandable multi-channel FAXCOM fax servers, depending on your present and future needs. FAXCOM for iSeries is a component of the FAXCOM Enterprise strategy, which is a solution designed to scale to your enterprise. FAXCOM multi-channel fax servers can be shared by one or more iSeries systems over serial or LAN/WAN interfaces. FAXCOM's open architecture works with virtually every computing, application and messaging environment, so your complex enterprise can rely on a single fax solution. A FAXCOM installed today for a single iSeries can be used with virtually any system or network you plan to install in the future.

## Major Benefits

- Fax directly from iSeries midrange computing systems
- Speed transaction document delivery
- Store and overlay business forms for transaction processing
- Organize with fax directories
- Include multiple documents in a single fax
- Fax immediately or at scheduled times
- Broadcast faxes to a group of recipients
- Simultaneously fax and e-mail documents
- Assign ports and establish least cost routing

## System Requirements

Any model IBM iSeries or AS/400 Advanced Series running Operating System/400 V4R3 or higher (also supports IBM System/36) with connections to a FAXCOM server.

## Options

- Seamless integration with Domino
- Multi-port support for any combination of FAXCOM servers
- Automatic inbound routing of faxes to iSeries folders
- Client/Server feature to fax from your Windows applications

## Seamless Integration

FAXCOM for iSeries provides seamless integration with major application vendors such as J.D. Edwards, CA/interBiz (PRMS), CommercialWare, daly.commerce, Friedman, Gauss (SpyView), MAPIC, BPICS, Mincron and Vormittag, JBA, JDA, Infinium, Lawson SSA Global Solutions, Stratton Warren, WonderWare and many other leading software vendors.

## The FAXCOM Solution

The FAXCOM solution allows users to send and receive faxes electronically using their existing computer network. The solution is based on a distributed server architecture that makes fax management and administration simple. The fax server is the component that interfaces with the telephone lines and handles the sending and receiving of faxes. The fax queue is a separate service that manages queuing, retries, internal fax traffic, and delivery to and from the users. Faxes are submitted to the queue by client applications or by automated processes that have been fax-enabled by Biscom APIs.
