

Integration with Microsoft SharePoint 2007

Microsoft SharePoint 2007 is an integrated suite of server capabilities for enterprise search, collaboration, content management, forms-driven business process facilitation, simplified information sharing, and enhanced business intelligence. Biscom's document delivery solutions integrate with SharePoint to enable it to act upon delivered documents.

Biscom Hosted Fax Services

Received faxes are another form of "content" that can be delivered to and acted upon by SharePoint.

- Faxes arrive as TIFF images and are converted to Searchable PDF files
- Received faxes with searchable content are then delivered to SharePoint Document Libraries
- SharePoint indexes and stores received faxes and can also initiate a SharePoint workflow process

Advanced Fax Routing

Advanced Fax Routing is a rules engine within FAXCOM Suite for Windows that can extract information from a fax and pass that information to SharePoint along with the original fax image.

Capabilities include:

Analyze known details of the fax and route accordingly

- DID of recipient, TSID and Caller-ID of sender can be assigned to specific Document Libraries
- Date & time of fax determines destination – ex: route to Document Library 1 during business hours and Document Library 2 after hours

Extract additional details by OCR processing or barcode recognition

- Determine appropriate Document Library by searching for key words or barcodes in the fax
- Split multi-page faxes for delivery to separate Document Libraries

Extract additional information from a network database or other resource

- Use OCR and barcode results to query a network resource for additional data

Format and complete fax delivery

- Deliver faxes as Searchable PDFs to appropriate Document Libraries
- Also deliver known details, OCR and barcode results, and results from network query as XML, CSV, etc.
- Ability to rename fax file

Additional SharePoint integrations

- Use SharePoint Site Aggregator to provide access to FAXCOM Web Client for users to send, receive, and track faxes
- Use SharePoint Site Aggregator to provide access to Biscom Delivery Server site for users to send, receive, and track delivery of large files and secure messages
